Mo Adlouni

U.S. Citizen

Frisco, TX • 214-726-2757 • moadlouni@yahoo.com

QUALIFICATIONS

Full Stack Engineer with 6+ years of enterprise experience building scalable, high-availability Java/Spring Boot services and distributed systems in regulated financial environments. Delivered backend APIs and BFF services supporting consumer payment workflows across Wells Fargo, J.P. Morgan Chase, and Bank of America, with hands-on experience in Kafka-based event-driven architecture, cloud deployments (PCF/Harness), and production observability using Splunk. Supports 24x7 systems through CI/CD automation, incident triage, and root-cause analysis. Frontend depth in React/TypeScript complements strong backend foundations across the full SDLC in Agile environments.

CORE SKILLS

Java (8/11/17) • J2EE • Spring Boot • Spring MVC • Microservices • Kafka • JPA (Hibernate) • REST API • SOAP • PCF Cloud • Harness • Docker • Kubernetes • MySQL • PostgreSQL • Cassandra • CI/CD • Splunk • TypeScript • React (16/17/18) • Redux • GraphQL • JavaScript • Webpack • ag-Grid • Jest • JUnit • React Testing Library • SonarQube • Agile/Scrum • AWS (PoC exposure: EKS, Lambda, EC2, S3, CloudWatch, IAM)

PROFESSIONAL EXPERIENCE

Wells Fargo | **Senior Software Engineer** | *Irving, TX* | *Sep 2024 – Jan 2026*

- Built and maintained Spring Boot BFF services supporting consumer debit card payment workflows across enterprise banking channels using Java, Kafka, React, TypeScript, and Redux Saga; integrated React frontend directly with downstream GraphQL APIs and coordinated with upstream payment system teams on API contracts and data flow integration to ensure end-to-end transaction reliability
- Participated in design and code reviews within Scrum team, enforcing coding standards via SonarQube; drove backend architecture documentation, technical roadmaps, and engineering best practices for 24x7 high-availability payment services
- Monitored production health and data integrity using Splunk dashboards and log analysis; participated in incident triage and on-call production support for 24x7 high-availability consumer payment systems, performing root-cause analysis to resolve defects and restore service stability
- Collaborated with Product, UX, and Platform Engineering teams to translate business requirements into scalable backend solutions; drove feature prioritization across multi-quarter delivery initiatives impacting consumer payment channels
- Built automated unit, integration, and end-to-end test suites using Jest, React Testing Library, and Junit integrated into Jenkins/CloudBees CI/CD pipelines to enforce performance budgets, improve release velocity, and maintain production health

J.P. Morgan Chase | **Software Engineer II** | *Plano, TX* | *Aug 2022 – May 2024*

- Built full-stack SPAs using React, TypeScript, and Java/Spring Boot backend services with JPA/Hibernate ORM; integrated frontend applications with RESTful APIs
- Optimized frontend performance through code splitting, lazy loading, and Webpack bundle tuning; implemented Redux state management and wrote comprehensive automated tests using Jest, React Testing Library, JUnit, and Mockito to maintain code quality and release stability
- Refactored legacy applications into microservices and micro frontends, improving scalability and maintainability; mentored junior engineers through pair programming and knowledge sharing
- Built an internal reporting dashboard using ag-Grid to surface large datasets for business stakeholders, enabling real-time filtering, sorting, and export of enterprise data; collaborated with product and operations teams to define reporting requirements and deliver actionable visualizations

- Contributed to database design and optimization (MySQL, PostgreSQL, Hibernate) and batch processing (Spring Batch)
- Assisted with AWS cloud migration proof of concept, gaining familiarity and exposure to EC2, S3, Lambda, EKS, CloudWatch, and IAM roles/policies across a multi-month initiative

Bank of America | **Software Engineer II** | *Plano, TX* | *Aug 2019 – Aug 2022*

- Built and maintained Spring Boot services using Java and UI components for large-scale financial systems including fraud logic in internal facing applications
- Enhanced frontend experiences using templating engines (Velocity, Handlebars.js)
- Supported enterprise backend services in collaboration with cross-functional engineering teams; contributed to the Erica AI virtual assistant on the BofA mobile app using Kotlin, collaborating with ML engineers and data scientists on backend integration
- Implemented CI/CD automation using Jenkins, uBuild, uDeploy, Ansible Tower, and Docker container-based deployments
- Utilized SQL (Oracle/MySQL) and NoSQL (Cassandra) for high-volume financial data systems
- Wrote new functionality for high visibility reporting tool in C#

EDUCATION

B.S. Computer Science – Oregon State University *(2018–2022)*

B.S. Biology – The University of Texas at Dallas *(2009–2013)*

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL, HTML/CSS, Kotlin, C, C++, Bash

Frameworks: Spring Boot, Spring Framework, Spring MVC, JPA (Hibernate), React, Redux, Node.js, Express.js, GraphQL, Webpack, Sass, Tomcat

Cloud & DevOps: Docker, Kubernetes, Jenkins, Harness, GitHub, Bitbucket, Maven, Gradle, AWS (EKS, Lambda, EC2, S3, CloudWatch, IAM), Ansible, SonarQube, Artifactory, Git, Github actions, CloudBees, Pivotal Cloud Foundry (PCF)

Databases: Oracle, MySQL, PostgreSQL, Cassandra, SQL Server

Tools: Jest, React Testing Library, JUnit, Mockito, Selenium, Cucumber, TestNG, Swagger UI, OpenAPI, Postman, Figma, Splunk, Jira, IntelliJ, VS Code, Linux/Unix
